WHAT IS A WEB FORM?

A web form is a plain web page with an HTML-element called <FORM>. The user can edit the information in the form elements.

The HTML web page also contains JavaScript code that updates the values and formats the entered data. The execution of JavaScript is complete secure. JavaScript cannot read or write files or any other data on users' computers or on the server.

When the submit-button is pressed, the entered data is sent of to a web server..
